LETTER OF COMMENDATION

on results of work on development and implementation of Leak Detection System ISA-SOU
by Insist Avtomatika LLC

In 2008 Insist Avtomatika LLC carried out work on development, commissioning and putting into operation of leak detection system ISA-SOU at two export pipelines from custody transfer facilities to oil-trunk pipeline tie-in point.

ISA-SOU detects size, location, time of a leak in real-time in dynamic and static modes of oil pipeline operation. ISA-SOU is elaborated with consideration of work papers ПД 13.320.00-KTH-233-09, API 1130, API 1155 and currently is in operation. There are no claims to the operation of the System.

During joint actions Insist Avtomatika employees elaborating and commissioning ISA-SOU proved their high technical level and showed themselves to good advantage.

Head of Automation Department
